Level 3 epilepsy centers provide an interdisciplinary and comprehensive approach to the diagnosis and treatment of patients with epilepsy. Many Level 3 centers offer non-invasive evaluation for epilepsy surgery and implantation of devices.

Enter your zip code to find more than 225 Level 3 and 4 epilepsy centers in 46 states, District of Columbia, and Puerto Rico.

Level 4 epilepsy centers serve as regional and/or national referral facilities for intractable epilepsy patients. The centers perform more complex forms of intensive neurodiagnostic monitoring and an array medical, surgical, and neuropsychological treatment. Many Level 4 centers are actively involved in clinical trials and are aware of trials in other centers, allowing for patient referrals.

There’s hope for people whose seizures are not well-controlled or who have side effects from medications.

Epilepsy centers provide a comprehensive team approach to the diagnosis and treatment of epilepsy. A patient-oriented team will typically include epileptologists (neurologists with expertise in treating seizures), neurosurgeons, neuropsychologists, nurse specialists, technologists, social workers, and others with training and experience in epilepsy.

Are you:

• Continuing to have seizures despite treatment for more than one year?
• Continuing to have seizures despite treatment with two different medications?
• Experiencing unacceptable side effects?
• Pregnant or want to become pregnant?

Epilepsy centers can help with:

Advanced testing to confirm epilepsy diagnosis or find another cause for symptoms.

A team approach to coexisting medical conditions including depression, learning disabilities, anxiety, and more.

Non-medication therapies including epilepsy surgery, the ketogenic diet, and neurostimulators.

Seizures secondary to genetic disorders or other rare epilepsies.

Education about effects of epilepsy and seizure medications on pregnancy and the developing baby.

Information about clinical trials of new experimental drugs or devices for seizures.
