

Vacuum Assisted Closure (V.A.C.) Therapy

Using a VAC ATS or VAC Freedom for wound care

What is V.A.C.® Therapy?

V.A.C. Therapy helps a wound heal. It is a system with a soft vacuum in it. The system:

- Helps close the wound.
- Removes fluids from the wound.
- Limits the need for daily dressing changes.

The system has five parts:

1. A therapy unit or machine.
2. Foam dressings. The dressing goes on or inside the wound.
3. Clear adhesive drape. The drape covers the dressing.
4. Plastic tubing. One end of the tubing connects to the dressing. The other end connects to the canister that fits into the unit.
5. Canister.

When the dressing is first put on, some children feel a mild pulling. This is normal. After a few minutes, this goes away.

What do I need to know about using the VAC Therapy unit at home?

- Check the dressing. Be sure the foam dressing stays shrunk down. It should look like a wrinkled raisin.
 - If it does not look like a wrinkled raisin, call the clinic. If it is after hours, call the doctor on call or come to the Emergency Department.
- Make sure the machine is running when the dressing is on.
 - Never turn it off for more than two hours.
 - Do not change the settings.

Other things to remember about the unit

- Use a three-prong electrical outlet with this unit.
- Keep the unit in the carrying case at all times.
- The unit should be upright with the touch screen facing up.
- Do not get the unit wet.

Safety

- Be careful that no one trips on the extra tubing and electrical cord.
- Be careful that the tubing does not catch on anything.

System alarm

The unit can alarm for many reasons. To solve alarms:

- Call The KCI Product Issue Response team at 1-800-275-4524.
- If KCI cannot solve the problem, call the clinic during the day time if this occurs. After hours, call the doctor on call or come to the Emergency Department.

Activity

Your child's ability to move around depends on their condition and the reason for the VAC Therapy.

See the Home Care instructions for your child's activity level.

What do I do with the unit when it is no longer needed?

- When your doctor has decided the VAC Therapy is no longer needed, call KCI at 1-800-275-4524 within 24 hours to start the return process.
- Tell the KCI representative:
 - Your child's name and phone number.
 - The date therapy ended.
 - They need to arrange pick-up of the VAC Therapy Unit.
- The KCI representative will talk with you about return options.

ALERT: Call your child's doctor, nurse, or clinic if you have any questions or concerns or if your child has:

- A fever of 101.5° F (38.6°C).
- More pain at the wound.
- Bloody drainage in the VAC tubing.
- Pus or a bad smell from the wound.
- More redness or warmth around the wound.
- Special health care needs that were not covered by this information.

Also call if:

- The foam dressing does not stay shrunk down and it does not look like a wrinkled raisin.
- You are having problems with the VAC Therapy machine.
- The VAC Therapy has been turned off for more than two hours.
